

The need for clean air in our homes should not be underestimated. Canadians spend an average of 90% of their time inside; and our homes contain many substances that may be hazardous to our health.

The Canary research and development experts have created the most advanced air monitoring system that is both reliable AND affordable.

**CANARY AIR QUALITY ASSURANCE AFFORDS YOU THE PEACE OF MIND YOU CRAVE WHEN IT COMES TO YOUR FAMILY'S RESPIRATORY HEALTH.**

# CANARY AIR QUALITY ASSURANCE

## Simple. Easy. Effective. Affordable.

### HERE'S HOW IT WORKS.

The Canary portable air monitor plugs into the wall outlets in your home. After a day in one room, it's moved to another room and, after another day, the air monitor is moved to a third room. (A bedroom, living room and the basement are usually sufficient to measure the most significant living areas of the home.)

At the end of 3 days, our licensed air quality professional will return to your home and connect the air monitor to a laptop and the internet.

The air monitor analyzes 6 key air quality factors for each room recognized as critical by the Canadian Healthy Indoors Partnership (HIP):

- Temperature
- Humidity
- Carbon Dioxide
- Carbon Monoxide
- Particulates
- Volatile Organic Compounds (VOCs)

From the analysis, the Canary software generates a password-protected report, highlights areas of concern ("warnings") and recommendations. Our air quality professional reviews the summary report for your home and discusses the recommendations for further actions.

### PEACE OF MIND.

In the end, the information provided about the air quality of your home will allow you to take corrective remedial actions to improve overall health and comfort within your home. Because at Canary Air Quality Assurance, we're not just offering air quality solutions, we're also providing peace of mind.

**When it comes to your family's respiratory health, Canary gives you total peace of mind.**

Your home could very easily contain many unhealthy and hazardous substances in the air.

Indoor air pollutants range from minor irritants such as dust and animal dander, to major irritants such as molds and chemical vapours that may be emitted from building materials and furnishings.

It is important to be aware of air contaminants that can affect your family's health and to improve the indoor air quality in your home.

The leading-edge and innovative technology of Canary Air Quality Assurance® now offers you the ability to test your home's air quality. Easily and affordably.

## **Complete Indoor Air Monitoring Service.**

Canary Air Quality Assurance provides high quality, professional, indoor air quality monitoring services through our network of licensed, trained authorized dealers to homeowners across North America.
